

CORE LEARNING TASK FOR ENGLISH

Read through the 'What is a Habitat?' text and answer the questions in section A, and B. Then complete task C.

What is a Habitat?
A habitat is where an animal or plant lives. An animal or plant must be able to obtain food, have shelter and have young in the place where it lives.

The Tiger
Tigers are only found in Asia. They live in rocky mountain areas, swampy plains and in thick forests. They seek shelter in long grass or caves during the heat of the day. They hunt wild pigs, deer and buffalo. The tigress looks after her cubs until they are two years old.

The Kestrel
Kestrels hover in the air before dropping at speed to capture voles, shrews and mice for food. They use sticks and straw to make a nest in a hole in a tree or on a cliff ledge. Eggs take twenty eight days to hatch. Both adults feed the young birds for about thirty days.

The Goldfish
Goldfish originally came from China but many are now kept in the UK in fish tanks or ponds. They eat common duckweed or dried fish food. The females lay their eggs in spring on fine leaved plants found in shallow water. The young, called fry, hatch in about three days.

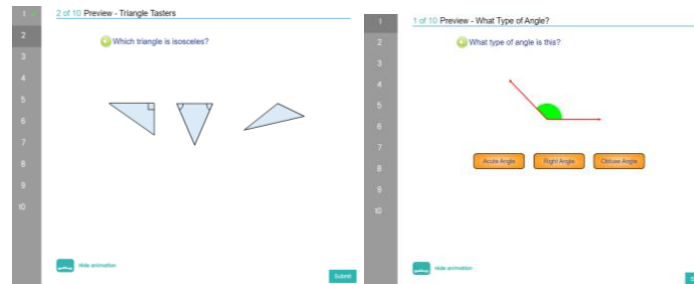

The Cactus
There are hundreds of different cacti, but they all have one thing in common. They are able to grow in hot desert climates. Cacti can do this because they store water in their fleshy stems. They are covered with prickly spines instead of leaves and make their own food with help from the sun.

CORE LEARNING TASK FOR MATHEMATICS

Please log onto your Mathletics account and complete the three assigned tasks:

- Triangle Tasters
- What Type of Angle?
- Classifying Angles

KEEPING IN TOUCH

If you have any questions or queries regarding remote learning tasks, please contact your child's class teacher through the email address below. We invite you to submit photographs of your children's experiences and photographs of completed paper based tasks to:
