

Dora wants to check this subtraction calculation.

$$4,096 - 2,356 = 1,740$$

Circle the addition that can be used to check Dora's subtraction.

$$4,096 + 2,356$$

$$4,096 + 1,740$$

$$1,740 + 2,356$$

$$1,740 + 4,096$$

Use an inverse operation to check these calculations.

a)

	1	3	6	0
+	2	9	7	3
<hr/>				
	4	3	3	3

b)

	8	2	6	4
-	3	1	4	2
<hr/>				
	5	1	2	2

Tommy works out $12,350 + 7,903$ incorrectly.

	1	2	3	5	0
+	7	9	0	3	
<hr/>					
	9	1	3	8	0

Tommy checks his calculation using the same addition.

Is this a good idea? Talk about it with a partner.

Match the inverse calculations.

$$2,482 + 6,428 = 8,912$$

$$5,271 + 4,212 = 9,483$$

$$5,984 - 3,172 = 2,812$$

$$8,912 - 6,428 = 2,482$$

$$9,483 - 5,271 = 4,212$$

$$8,912 - 5,271 = 3,641$$

$$8,912 = 3,641 + 5,271$$

$$5,984 = 3,172 + 2,812$$
