Fact or Opinion?

The Wolf's Autobiographical Account

I was born as one of 14 baby wolves into a large pack. However, I was the weakest of the pack and my parents never had much time for me. I did not do well at school and left as soon as I was able. My first winter I spent in the forest without any proper place to sleep. If I ever went anywhere near a village or farm, I was chased away. I tried selling icicles but there were not many takers! Many nights I spent shivering with the cold. In the end my asthma got so bad that I was huffing and puffing.

Amazing Animals

Animals are amazing but most people only know about common pets such as cats and dogs. However, out in the wild some of the most extraordinary creatures live. Many have fascinating lives.

Vampire bats do exist and are not just found in films and the books of Darren Shan. However, the real creature is far removed from Dracula! They do not bite but scratch with their teeth until they draw blood. In fact, they are so gentle that you might not even wake up!

Goldfish have a memory that only lasts about seven seconds so that once it has been round the bowl, it may well have forgotten where it started! Rats have a memory that may only last about half a minute – maybe that's why they always look inquisitive because every half a minute everything is new all over again!

Yes – UFOs Do Exist

Many people do not believe that UFOs exist. However, there are many reasons why this viewpoint can no longer be sustained.

Most people believe that the universe is endless. If this is the case, then this means that inevitably there must be life on other planets. It is obvious that other beings would be curious and attempt to make contact.

For years we have been sending radio signals deep into space and on several occasions an answering code has been returned. Although the significance or meaning of the return signal has not yet been deciphered, it is clear that something has been attempting to make contact with earth.

How to Care for Your Teeth

Teeth are essential for eating. Human beings eat both plants and animals and their teeth are especially suited to cutting, tearing and chewing their food.

The teeth at the back of your mouth are called molars and these are used for grinding food. They tend to be fairly large and flattish so that they can crush and chew food. Believe it or not, you have fangs called canine teeth that are used for biting into food and holding on! The flatter, sharp front teeth are incisors and are used to cut up food.
